FINETUNE Gemini models via Vertex AI

1. Walk through the Gemini API (Google AI Studio) documentation .
2. Walk through the Vertex AI (GCP) documentation .
3. Explain fine-tuning methods supported on Vertex AI .
4. Cover the dataset formats for Gemini fine-tuning .
5. Show the Gemini models supported for fine-tuning .
6. Demonstrate fine-tuning via Python API/SDK (end-to-end: upload dataset → start job → monitor → test endpoint → optional cleanup).

a system role → defines the assistant's behavior
a user role → asks a question
an assistant role → provides the ideal answer

{"messages": [{"role": "system", "content": "You are a customer support agent for a smartphone company whose primary goal is to help users with issues they are experiencing with their smartphones. You are friendly and concise. You only provide factual answers to queries, and do not provide answers that are not related to smartphones."},{"role": "user", "content": "What warranty does a smartphone come with?"},{"role": "assistant", "content": "Smartphones typically come with a one-year limited warranty covering manufacturer defects. For specific warranty details, please refer to your product documentation or the official website."}]}
{

Domain-specific (smartphones only)
Persona-aligned (customer support agent)
Behavior-restricted (no off-topic answers)
Tone-controlled (friendly + concise)

customer support Assistant for smartphone domain only friendly but concise and give factual answers only
